

To Whom it may concern

DAAS & Chemicals S.p.A. hereby declares, under its sole responsibility and to the best of its knowledge, that the packaging materials supplied in connection with its chemical and coating products are managed and selected in accordance with the applicable requirements of **Regulation (EU) 2025/40 on packaging and packaging waste (PPWR)**, applicable from 12 August 2026.

The following is a summary of the main PPWR requirements applicable to the packaging supplied by DAAS & Chemicals:

Article 5 – Substances in packaging

Based on internal analytical assessments and the technical documentation and declarations provided by the relevant packaging manufacturers and suppliers, DAAS & Chemicals confirms that the packaging materials used for its products comply with the applicable requirements and parameters established by Regulation (EU) 2025/40.

In particular:

PFAS: for packaging intended for non-food contact applications, the PFAS content is below the applicable regulatory threshold established by the PPWR;

Metals: We hereby certify that the materials employed by us comply with the PPWR and subsequent updates concerning the total concentration levels of lead, mercury, cadmium and hexavalent chrome.

DAAS & Chemicals therefore considers the packaging materials covered by this declaration to meet the applicable PPWR requirements concerning substances of concern.

The assessment is based on the information and documentation currently available and will be reviewed where necessary in light of regulatory developments, changes in packaging specifications or updated supplier information.

Article 6 – Recyclability of packaging

DAAS & Chemicals confirms that the packaging materials used for its products are recyclable and are selected taking into consideration the applicable recyclability requirements of Regulation (EU) 2025/40.

The packaging formats currently used, including steel cans, plastic buckets, drums, HDPE containers and IBCs, are designed and selected to enable recycling through the appropriate waste management streams.

Furthermore, the packaging placed on the market by DAAS & Chemicals bears the applicable environmental labelling and information required to support the correct identification and management of the packaging waste.

DAAS & Chemicals will continue to monitor the applicable PPWR requirements and, where necessary, further adapt its packaging solutions and labelling in line with the applicable implementation timelines.

Article 7 – Minimum recycled content in plastic packaging

DAAS & Chemicals has assessed the use of recycled plastic content in its plastic packaging.

In particular, the plastic buckets used for DAAS & Chemicals products contain up to 60% recycled material, depending on the specific packaging format and supplier specifications.

The use of recycled material contributes to the progressive alignment of DAAS & Chemicals' plastic packaging with the requirements of Article 7 of Regulation (EU) 2025/40, while maintaining the functional, technical, safety, transport, storage and handling performance required for chemical and coating products.

The recycled content is supported by technical information and documentation provided by the relevant packaging manufacturers and suppliers and will be monitored and updated as necessary in accordance with the applicable PPWR requirements and implementation timelines.

Article 10 – Minimisation of packaging

DAAS & Chemicals is committed to complying with the requirements concerning the minimisation of packaging. Packaging is selected and used with the objective of avoiding unnecessary packaging and minimising packaging volume and weight, while maintaining the functional, safety, transport, storage and handling requirements of chemical and coating products.

DAAS & Chemicals is further working on the continuous improvement and optimisation of its packaging solutions in order to progressively reduce packaging volume and weight, where technically feasible and without compromising the required performance and safety of the packaging.

Article 12 – Labelling and information requirements

DAAS & Chemicals confirms that the packaging used for its products is provided with the applicable environmental labelling and information concerning the packaging material and its proper waste management.

The environmental labelling currently applied to the packaging enables the relevant packaging material to be identified and supports its correct management at the end of life.

DAAS & Chemicals will ensure the progressive alignment of its packaging labelling with the harmonised labelling requirements established under Article 12 of Regulation (EU) 2025/40, in accordance with the applicable implementation timelines and related implementing acts.

The Company will also monitor any additional requirements concerning digital information, QR codes or other standardised data carriers, where applicable to the packaging concerned.

Article 15 – Obligations of manufacturers

DAAS & Chemicals maintains appropriate internal procedures and supporting documentation to reasonably demonstrate compliance with the applicable PPWR requirements. Technical information relating to packaging is obtained and maintained from the relevant packaging manufacturers and suppliers.

Article 18 – Obligations of importers

Where applicable to packaging supplied through import channels, the relevant conformity and documentation requirements are taken into consideration.

Traceability and supporting documentation

DAAS & Chemicals maintains appropriate technical and compliance documentation relating to the packaging materials used for its products. Such documentation may be made available to competent authorities upon justified request and in accordance with applicable legal obligations.

This declaration applies to industrial packaging formats including **steel cans, plastic buckets, drums, HDPE containers and IBCs** used for DAAS & Chemicals' chemical and coating products.

This declaration remains valid provided that the intended use, storage conditions, transport conditions, packaging specifications and product composition remain unchanged.
